Fisher[™] D4 Control Valve Assembly

The Fisher D4 control valve is a compact, rugged globe valve designed primarily for high-pressure throttling applications using either pneumatic or electric control. This valve is ideal for use on pressure and flow control applications within the oil and gas production industry. The D4 is an excellent control valve for high-pressure separators, scrubbers, and other processing equipment. These valves are especially useful for either throttling or on/off control of liquids or gases which are gritty, sticky, or which have a tendency to build up on internal valve parts.

If the control valve requires maintenance, the trim and packing can be maintained by removing the deep-bore hammer nut and lifting the actuator/bonnet assembly off the valve without disassembling the actuator.

Electric and Pneumatic

- Safer Bonnet / Valve Body Connection— Unique design provides additional protection if disassembly of bonnet/valve body connection is inadvertently started while there is still pressure in the valve body. Pins mounted in the valve bonnet help ensure the bonnet disengages from the valve body as the hammer nut is removed, while the threads are still engaged.
- Heavy-Duty Guiding—Massive guiding (figures 1 and 2) positively aligns the valve plug in the seat ring for reliable service. The screwed-in seat ring completely encloses the seat ring gasket.
- Quad-O compliant Packing System --Features Fisher ENVIRO-SEAL[™] packing technology to provide reduced packing maintenance and meet Low E fugitive emission requirements for Leak Detection and Repair (LDAR) programs in compliance with the Code of Federal Regulations (CFR) 40, Part 60, Subpart OOOO.

FISHER D4 CONTROL VALVE WITH Gen 2 easy-Drive™
ELECTRIC ACTUATOR
(NPS 2 RF FLANGED END CONNECTION)

W8531

■ NACE Constructions—NACE compatible trim is available with the D4 control valve. These constructions meet the metallurgical requirements of NACE MR0175 / ISO 15156.

Features (continued)

Electric and Pneumatic

- Quick-Change Valve Plug—Removable groove pin allows quick, easy valve plug replacement.
- Severe Service Capability with Tungsten Carbide Trim—D4 valves are available with tungsten carbide trim for erosive service. This trim is designed specifically for severe service applications in the oil and gas industry. Durable tungsten carbide trim may benefit your application by wearing better and lasting longer.
- Easy Installation—Compact design allows installation where space is a premium. Screwed valve bodies feature compact face-to-face dimensions while flanged valve bodies conform to ISA-75 standards for maximum versatility.
- Easy Maintenance—Hammer nut bonnet/body joint allows repair or maintenance with a minimum of tools, without removing the valve body from the piping system. Seat ring can be removed with a standard socket.
- Integral Bonnet Flange— Bonnet has an integral flange that accepts hammer nut force when making the bonnet-to-body connection. There are no snap rings subject to possible failure in sour service or in atmospheric corrosion.
- Standard Trim for Throttling or On-Off Service— Micro-Form trim is standard for throttling or on-off service at no extra cost.
- Application Flexibility—Choices of port diameters up to 31.8 mm (1.25 inches), end connections, and trim materials suit these valves to many applications, including sour service.

Electric

- Low Power Consumption-- The Fisher easy-Drive electric actuator operates with 9 to 30VDC and less than 0.1 watt hours per operation, using Modbus, 4-20 mA, or dry contact control signals.
- Low Temperature-- The easy-Drive electric actuator design allows use in ambient temperatures as low as -20°C (-4°F) without use of a heater.
- Easy Installation--The compact design allows installation where space is a premium. Fisher easy-Drive calibrates by simply opening and closing the valve.
- Remote Monitoring and Configuration-- Loss of signal position is programmable over Modbus.

Pneumatic

■ Low Temperature Materials--Valve construction materials allow use in applications as low as -40°C (-40°F) for the pneumatic actuator.

Installation

D4 control valves may be installed in any position, but normally the actuator is vertical and above the valve. Install the control valve so the flow direction arrow on the side of the valve body indicates the direction of the process flow.

Dimensions are shown in tables 12 and 13 and figures 1 and 2.

Ordering Information

When ordering, specify:

Application Information

- 1. Type of application
 - a. Throttling or on-off
 - b. Reducing or relief (back pressure)
- 2. Controlled fluid
 - a. Type (include chemical analysis, if available)
 - b. Temperature (normal and maximum anticipated)
 - c. Specific gravity

- 3. Range of flowing inlet pressures
- 4. Pressure drops
 - a. Range of flowing pressure drops
 - b. Maximum drop at shutoff
- 5. Flow rates
 - a. Minimum controlled flow
 - b. Normal flow
 - c. Maximum flow
- 6. Input signal range to actuator

Control Valve Assembly Information

Refer to the Specifications and review the information under each specification.
